Figma · CI/CD · Docker · Cloudflare Workers · Shopify · SSE / WebSockets

EDUCATION

B.Sc. Information Technology

Bahauddin Zakariya University
Multan, Pakistan

2019 – 2023

PROFESSIONAL SUMMARY

Full-stack-minded software engineer with 3+ years shipping production features across web, mobile, and Shopify at Devnodes, and six products built independently since. I own features end-to-end — from API contracts to the UI — and go deepest in **payment systems** (Stripe subscriptions, webhook pipelines, dual-approval flows, 25+ REST endpoints), **real-time interfaces** (live chat, seat reservation, notifications) and **local-first, multi-tenant architecture**. I write TypeScript and care about the details that make production systems reliable.

WORK EXPERIENCE

Frontend Engineer

Jun 2023 – Present

Devnodes · Multan, Pakistan · Full-time

PAYMENTS & SUBSCRIPTIONS

- Architected a **multi-provider payment system** across a Next.js / NestJS monorepo, integrating **Stripe Node.js SDK** via a provider-agnostic adapter layer — enabling new payment gateways (e.g. Paystack) to be onboarded with **zero changes to core business logic**.
- Engineered a complete **subscription lifecycle UI** covering **3 plan tiers** (Free / Pro / Enterprise) — plan selection, free trials, upgrade / downgrade, grace-period warnings, and cancellation — with all server state in **Zustand** via domain-sync hooks with optimistic updates and automatic rollback on failure.
- Delivered a **dual-approval compliance workflow** for payment holds in the admin backoffice — create → second-admin approval → release / auto-expiry — with compliance-audited ledger entries and real-time status dashboards.
- Implemented an **event-driven webhook pipeline** processing **5+ Stripe event types** (payment.completed, subscription.created, refund.completed, chargeback.received) with HMAC signature verification, replay-attack protection, and **idempotency keys to prevent duplicate charges**.
- Built a **campaign fundraising payment flow** with full transaction audit trails, PDF receipt generation, and cross-domain event emission — automatically triggering campaign milestone progression on each confirmed contribution.
- Designed and integrated a **REST API layer spanning 25+ payment endpoints** — checkout, subscriptions, installments, holds, wallet adjustments, provider management, and reconciliation — consumed across both the web app and backoffice.

PLATFORM FEATURES & APPS

- Built a **Google Drive-style Media Asset Management system** — multi-file upload, deletion, and cross-application image reuse — cutting the time to manage and deploy media assets across the platform by eliminating repeated uploads.
- Implemented **real-time WebSocket chat (Venota App)** with live message delivery, full chat history persistence, and live notifications — enabling instant communication between customers and service providers.

- Architected **real-time train search and seat-reservation** for Trek Train — live timetable queries, conflict-safe concurrent seat locking, and high-traffic handling with no double-bookings across simultaneous user sessions.
- Engineered a **3-step onboarding flow** for Trek Train supporting **3 sign-up methods** (phone / email / Google), OTP verification, T&C acceptance, and GPS-based city auto-detection.
- Integrated **Paystack payment processing** via a responsive WebView checkout with real-time webhook confirmations — achieving reliable ticket fulfillment with instant transaction status feedback to users.
- Built a **real-time notification system** delivering instant booking confirmations and proactive **30-minute train arrival alerts**, keeping passengers informed without opening the app.
- Created a **custom Shopify branch-locator app** with an interactive real-time map — geolocation auto-detection, branch search & filtering, and turn-by-turn directions — working seamlessly across all device sizes.

PERSONAL PROJECTS

Daynora
Local-first life app · in pre-launch

Calm home for habits, tasks, journal, budget and more on phone and web, in English, Urdu, Hindi and Arabic. Shared sync engine over local SQLite, 100+ tested Postgres migrations, and database-enforced staff roles.

Expo · Next.js · Supabase · SQLite · Safepay · Turborepo

Skolara
Multi-tenant school platform

Fees, attendance, exams and parent communication for private schools, with subdomain tenancy, JWT-scoped queries, Urdu RTL, and Claude-assisted report comments.

NestJS · Prisma · Next.js · Expo · PostgreSQL

SnapFind
AI event photos · in pilot

Guests take a live selfie and see only their own photos. Face detection worker with liveness checks, event-scoped biometrics and deletion on request.

Python · FastAPI · Next.js · Docker

Tessera
Hex-grid reward game

Telegram Mini App, iOS and Android over one authoritative core: sealed boards, an append-only double-entry ledger, withdrawal reserves and an admin console.

TypeScript · Supabase · Expo · Edge Functions

EngForge
github.com/nadirhussain-dev/DevForge

Engineering career OS with evidence-based mastery, a deterministic roadmap engine and privacy enforced by RLS across about 60 tables.

Next.js · Supabase · PostgreSQL

DevSprint 60
github.com/nadirhussain-dev/dev-sprint

60-day interview tracker with spaced repetition, a scored simulator and PWA push reminders.

Next.js · Supabase · PWA
